PHYSICOCHEMICAL TESTING

Melting-point apparatus

Apparatus to determine the melting point of one or more solids: capillary models with a platinum sensor, electronic control and digital display, and a temperature-controlled hot-stage model.

Features

- Platinum temperature sensor
- Electronic control with heating-cycle control
- Digital display, 0.1 °C resolution
- 8X magnifier
- Aluminium block for 1 to 3 capillaries, ceramic-insulated
- Includes 100 capillary tubes
- Zinc-coated steel cabinet with epoxy finish
- 127 V, 60 Hz; 50 W maximum

Specifications

Model	Type	Range
PF-2000	Digital capillary	Ambient to 199.9 °C
PF-3500	Digital capillary	Ambient to 350 °C
PF-1400	Hot stage	Thermometer 20 to 300 °C

Applications

- Identification and purity of solids
- Pharmaceutical and chemical quality control
- Organic chemistry teaching
